8.67kg (5+3)

Testing/Standards:

Load tested to BS EN 12811

Galvanised to EN ISO 1461

Zinc Plated to BS EN 12329:2000

Guidance:

Transportation - care must be taken when transporting transoms to ensure they are banded and wrapped sufficiently prior to loading, while ensuring when loaded they are secured to the vehicle using straps at appropriate intervals.

Handling - care must be exercised when manually handling transoms, in particular that the bolt is tightened sufficiently to avoid the extension sliding out.

Storage - all components must be stored in a manner that limits any detrimental environmental effect due to weather or corrosive substances.

Inspection - routine inspections should be scheduled, its is best practice to inspect transoms before each work shift and after any occurrence which could affect the integrity of the system.

Traceability - all transoms supplied by Trademagic are fully traceable with unique identification code.
