Compliant with BS EN 12811 Temporary Works Equipment and BS EN 1993-1-1:2005 Eurocode 3 Design of Steel Structures.

2 tonne stacked 4no high, total weight of 8 tonne

1.4 tonne stacked 6no high, total weight of 8.4 tonne

Guidance:

Transportation - care must be taken when transporting storage, ensuring that straps are using in appropriate areas and there is no risk of the strap fraying or becoming cut by any sharps. Any storage that is stackable - such as fitting bins and pallets - must be stacked correctly, taking care to ensure the feet are aligned with the legs and the legs sit inside the cup of the foot.

Handling - care must be exercised when manually handling any storage. It is recommended that two persons handle each fitting bin, at one end each.

Storage - fitting bins must be stored in a safe manner, and if stacked, care must be taken to ensure all four legs sit inside the cut of the foot. Please note the safe working load on each storage component prior to loading and stacking.

Inspection - routine inspections should be scheduled, it is best practice to inspect storage products before each work shift and after any occurrence which could affect the integrity.
