

SHEE **RODUCT INFORMATION**

Product:

Ladder Clamp (Square)

Product Code :

AOLC

Product Description:

Manufactured from pressed steel, this process changes the shape of the sheet metal into that of the required object. The sheet metal is then cut to size from the required piece, and is then pressed into shape using either hot or cold force.

Weight:

0.81kg

Dimensions:

Designed to suit 48.3mm OD tube and square ladder section

Testing/Standards:

BS1139

Zinc plated to BS EN 12329:2000

Guidance:

Transportation - care must be taken when transporting fittings, ensuring that all fittings are secured in their storage and unable to become loose. Straps are used in appropriate areas and there is no risk of the strap fraying or becoming cut by any sharps.

Handling - care must be exercised when manually handling fittings, in line with manual handling procedures.

Storage - all components must be stored in a manner that limits any detrimental environmental effect due to weather or corrosive substances. Please note the safe working load on each storage component prior to loading and stacking.

Inspection - routine inspections should be scheduled, it is best practice to inspect fittings before each work shift and after any occurrence which could affect the integrity. All couplers should be properly maintained and examined before use to ensure that there is a free-running, lightly lubricated, fit between the buts and bolts.

Traceability - all fittings supplied by Trademagic are fully traceable with unique identification code.
